The Stormer Porter was designed as a multi-purpose "Pick-up truck on the water". It can carry a 1.22 x 2.44 m load while still being compact and able to be moved on a trailer. It is available in 6.5 and 7.5 m versions.

The push bow and rubber fender make the Porter a very rosburst and easy-to-handle boat. It is built with a coventional propeller shaft and powered by naturally aspirated diesels from 28 to 110 hp. For non-diesel applications it can be powered with a single or twin outboard engines.

Stormer Marine is a young Dutch shipyard that builds workboats for discerning professional clients worldwide. We at Stormer combine the Dutch shipbuilding craft with the latest technologies in marine design, engineering, build and propulsion.

We deliver workboats to authorities, contractors, harbour officials and rescue organizations all over the world. Applications include patrol, rescue, pollution control, fire fighting, surveillance, contracting, towing and transportation serices

ALUMINUM WORKS FOR US

We build our boats to last. We use seawater-resistant 5083 aluminum because it is rugged, lightweight and maintenance free. Aluminum is a sustainable building material and can do without expensive and vulnerable coatings. Parts are digitally cut for a perfect fit and finish.
